Fractional roles

A senior chief information security officer, head of AI, or both, for the days you agree. In the first month you get a baseline review and a 12-month plan agreed with the board.

After that, the role runs the programme, reports to the board, answers customer questionnaires, and leads on incidents and audits. The head of AI leads from the business side, with the technical depth to challenge suppliers. The board keeps its legal accountability, and every document stays with you.

THE ROLES

Chief information security officer

Runs your ISO/IEC 27001 system and security regulation duties, and leads incident response.

Head of AI

Leads AI from the business side: where it adds value, what it costs, and how it is governed.

Both in one role

One senior person across security and AI.

HOW IT WORKS

01 Baseline and plan — MONTH ONE
Where you stand, and a 12-month plan agreed with the board.

02 Agreed days — EVERY MONTH
Running the programme on site or remote, and reporting to the board.

03 Senior cover — WHEN IT MATTERS
In the room for incidents, audits, customer questions and regulators.

WHEN TO CONSIDER IT

- A customer or investor asks who leads security or AI.
- A regulator expects a named, competent person.
- You have just built an ISO/IEC 27001 or ISO/IEC 42001 system.
- Your security lead has left and you need cover now.

Also available: a fractional data protection officer (DPO)

ACROSS EUROPE AND BEYOND

International groups often need a senior lead who knows the EU rules for their Irish or European business. We act as that lead, working with group security and compliance teams in the UK, the United States, South Africa and elsewhere, and reporting to the local board.

WHO IT IS FOR
Firms of 20 to 500 staff in technology, medtech, financial services and supply

TIME
From two days a month to two days a week
